

WAZIR CVI

Corporate Visual Identity & Brand Guidelines

A Counselor for Your Local AI Fleet. Empowering distributed orchestrations with security, precision, and governance.

Document Version: 1.0

Author: Waël Hassan

Classification: Open Source Core / Brand Standard

1. Brand Overview & Philosophy

Waziris is an open-source meta-harness designed to schedule coding agents across local hardware (the vizier, وزیر), clusters, gate every action through strict policy verification, and enforce rigorous test validation.

The Metaphor

In classical shatranj (the Persian and Arabic ancestor of chess), the wazir did not rule; he advised the king on fleet positioning and rules. Wazir runs your local AI fleet while you remain the sovereign king.

Visual Tone

The visual identity merges cryptographic precision with royal authority. It reflects high-performance local AI compute through dark abyssal backgrounds, electric node highlights, and metallic silver shields.

2. Typography Hierarchy

Typography establishes clear information hierarchy across CLI interfaces, web dashboards, and documentation.

Role	Typeface Family	Weight / Style	Application
Primary (Display)	Archon Bold / SF Pro Display	Bold (700)	Headlines, Product Logos, Major Section Banners
Secondary (UI / Body)	Nexus Light / Inter	Regular (400) & Medium (500)	Running text, descriptive paragraphs, UI labels
Monospace (Terminal)	JetBrains Mono / Fira Code	Regular / Bold	CLI commands, logs, configuration code blocks

```
# Primary Type Specimen
ABCDEFGHIJKLMNOPQRSTUVWXYZ
abcdefghijklmnopqrstuvwxyz
0123456789 ( ; : / { % & * }
```

3. Color Palette

The Wazir palette is engineered for high-density developer interfaces and dark-mode optimization.

Dark Abyss (Primary Background)
HEX: #0f131a | RGB: 15, 19, 26

Metallic Silver (Neutral / Structure)
HEX: #94a3b8 | RGB: 148, 163, 184

Electric Blue (Active / Accent)
HEX: #38bdf8 | RGB: 56, 189, 248

Data Green (Success / Verified)
HEX: #22c55e | RGB: 34, 197, 94

4. Brand Voice & Core Pillars

Every interaction—from CLI output strings to documentation—must embody the five foundational pillars of Wazir:

1. Strategic

Advises without overriding the operator; plans multi-step execution logic precisely.

2. Secure

Gates every shell command, file path, and network request through a deterministic policy engine.

3. Orchestrated

Coordinates multiple local nodes (Apple Silicon & NVIDIA DGX/RTX) seamlessly via SSE streams.

4. Intelligent

Leverages context compilation and exact reference binding without guessing.

5. Transparent

Provides immutable decision records via `wazir explain` and immutable historical blocks.

5. Implementation & Usage Guidelines

When applying the Wazir identity in software interfaces, promotional graphics, or documentation, ensure proper clear space around the emblem and maintain high contrast against dark environments.

- Minimum digital display size for the shield emblem is **25mm** or **96px**.
- Always pair the Wazir wordmark with the subtitle descriptor *"A Local AI Fleet Counselor"* in technical contexts.
- Never modify the core proportions of the shield geometry or substitute unauthorized neon accent colors.
